5. Check whether a number is Prime or Not

The screenshot displays a Windows desktop environment with a Visual Studio Code (VS Code) editor window open. The editor is showing a Java file named `PrimeCheck.java` located in the `java programs` folder. The code in the file is as follows:

```
public class PrimeCheck {  
    public static void main(String[] args) {  
        prime = false;  
        break;  
    }  
    if (prime) {  
        System.out.println(x: "Prime number");  
    } else {  
        System.out.println(x: "Not a prime number");  
    }  
}
```

The VS Code interface also shows a file explorer on the left with the `java programs` folder expanded, listing various Java files. The bottom panel of the editor shows the `Terminal` tab, which contains the following output:

```
PS C:\Users\Ayushi Mittal\java programs> javac PrimeCheck.java  
PS C:\Users\Ayushi Mittal\java programs> java PrimeCheck  
Enter a number: 6  
Not a prime number  
PS C:\Users\Ayushi Mittal\java programs>
```

The Windows taskbar at the bottom shows the system clock as 16:01 on 23-08-2026, along with various system icons and the search bar.
